

DocuSign
Trust Brief

DocuSign's Commitment to Trust

Businesses around the globe leverage the DocuSign Agreement Cloud for their most sensitive and time-critical transactions, and we're committed to maintaining the secure, compliant, and available environment they've come to trust. In fact, trust is at the core of our business and woven into everything we do.

World-class protection

Strong security mechanisms and robust operational processes allow us to meet or exceed the highest international security standards and protect your documents and data.

Global reach and acceptance

DocuSign eSignature is lawful in most civil and common law jurisdictions for most agreement types and employed by hundreds of millions of users worldwide, including the European Union.

High availability

A robust infrastructure delivering consistent high availability provides assurance that our service is there whenever you need it.

World-class protection

DocuSign has implemented rigorous policies, processes, and training to meet the strict privacy, security, and compliance requirements of some of the most stringent certifications around the world.

Privacy

We secure and protect not only your agreements but also the critical business and personal information that you entrusted to us.

- **Confidentiality:** DocuSign manages customer data only on the customer's behalf and in accordance with their instructions. We access personal data only to the extent necessary to perform services, and we require all third-party subprocessors to adhere to the same privacy practices as DocuSign.
- **Privacy rights:** We recognize the privacy rights of our prospects, customers, and partners and adhere to global privacy regulations, including the European Union's [General Data Protection Regulation](#) (GDPR).
- **Privacy management:** We continually review rapidly evolving global privacy requirements to strengthen DocuSign's data protection program. We also perform regular internal audits of our privacy practices and regularly train all personnel on data privacy.

Security

We make significant investments in our security and operations and maintain a comprehensive and robust approach across our platform, processes, and people.

- **Platform:** DocuSign's advanced platform architecture and security operations are designed to maximize security for data at rest and in transit, and each component of our trusted platform undergoes stringent security review.

Geo-diverse, ISO-certified, SOC-audited data centers | 24x7x365 onsite security | Endpoint security
AES 256-bit encryption (at rest) | PKI technology | Malware protection

- **Processes:** DocuSign's expansive protection program – including environment monitoring, security reviews, and external penetration testing – allows us to adjust our security posture and protect customer data across our services.

24/7 incident response | Processes, policies, and reviews | SDLC security

- **People:** Everyone at DocuSign is committed to security excellence, and our training and awareness programs ensure that privacy and security stay top of mind. We also actively monitor, manage, and improve the security across DocuSign.

DocuSign security council | Cross-functional security experts | Annual and specialized training

Risk management

DocuSign proactively employs risk management methods across our enterprise to identify, manage, and mitigate risk. We meet or exceed national and international standards while maintaining strict policies and practices that set the standard for world-class risk management.

- **Enterprise risk management:** DocuSign has adopted a holistic, enterprise-wide approach to risk management. We continually identify, assess, and analyze key conditions and events in terms of likelihood and magnitude of impact to our business. This comprehensive monitoring process is complemented by an in-depth response strategy.
- **DocuSign Control Framework (DCF):** The DCF is a comprehensive matrix that tracks control activities across DocuSign's entire eSignature platform and operations. A security subset of the DCF ensures mapping and adherence to key security, privacy, and industry standards, such as SOC 1, SOC 2, ISO 27001, and PCI DSS.
- **Internal audits:** Internal audit teams continually review security and operational processes.

Compliance certifications

In addition to internal audits, DocuSign also undergoes regular external audits to maintain globally recognized certifications and attestations, including:

SOC 1 Type 2 and SOC 2 Type 2

As a SOC 1 and SOC 2-certified organization, DocuSign undergoes annual examination and testing. The resulting external audit reports attest to the design and operating effectiveness of internal controls across our business, including security, availability, processing integrity, and confidentiality.

ISO 27001: 2013

The highest level of global information security assurance available today, ISO 27001 provides customers assurance that DocuSign meets stringent international standards on security.

PCI DSS

DocuSign maintains compliance with the current version of the PCI Data Security Standard (DSS) to ensure safe and secure handling of credit card holder information.

For a full list of our certifications and geographical recognition, visit the [Compliance page on the DocuSign Trust Center](#).

Global reach and acceptance

DocuSign's eSignature solution is lawful in most civil and common law jurisdictions for agreements with few exceptions. The solution provides authenticated signer identity, signature validity, and enhanced privacy and security features that support court admissibility and non-repudiation.

Worldwide coverage

Many countries have regulations governing electronic transactions and identification and other trust services, including:

- The Electronic Signatures in Global and National Commerce Act (ESIGN) and the Uniform Electronic Transactions Act (UETA) in the United States
- Electronic IDentification, Authentication, and trust Services (eIDAS) in the European Union

Review the [DocuSign eSignature Legality Guide](#) to learn about current eSignature laws, local legal systems, and electronic signature technology preferences for countries around the world.

Authenticated and valid

Use of strong identity authentication lowers the risk of repudiation. With DocuSign eSignature, you can confirm the identity of signers using multiple authentication options based on increasing levels of validation. DocuSign also supports digital signatures, provides all signature types defined under eIDAS (Standard, Advanced, and Qualified), and ensures that companies of all sizes can compete at speed and scale in the EU.

Document integrity

DocuSign eSignature automatically tracks and maintains a time-stamped audit trail of every viewing, printing, sending, signing, or declining activity. Once an agreement is fully executed, it remains safe and encrypted while on the system. If downloaded, DocuSign secures the document and signatures with a tamper-evident seal. Those executed agreements also include a court-admissible Certificate of Completion, which provides far more detail about the signing process than is possible using a paper-based process.

High availability

DocuSign eSignature maintains a scalable, high-performance, high-availability platform that provides continuous availability across the globe. Customers can count on our service to conduct their business from almost anywhere, on nearly any device.

Built-in redundancy

DocuSign eSignature is architected for zero data loss during catastrophic events and includes built-in redundancy. We perform secure replication of customer data at the data center in use as well as, in near real time, to geo-diverse data centers. All historical and document data is synchronized using a proprietary document replication service, which takes the place of traditional backups. We also maintain a disaster recovery plan to be implemented in the event of a disaster (or prolonged interruption of service) and a business continuity plan.

Robust performance management

To ensure that our service is always available when you need it — even during peak traffic — and scalable for future growth, DocuSign undertakes robust capacity planning. The DocuSign eSignature platform runs below capacity to accommodate spikes in demand on our service, and we process approximately 30 billion pieces of telemetry to monitor and assess the end-to-end customer experience as one of multiple inputs for scalability planning.

Real-time visibility and ongoing support

Comprehensive training and support services are available to help you should issues arise, including 24x7 live support, online case submission and management, and escalated tier-two support. In addition, we maintain a public-facing Trust Center that provides continuous updates on DocuSign eSignature availability, 12 months of uptime data, and technical best practices. The Trust Center also includes information about service disruptions and security alerts and offers customers the ability to report any system issues.
