Protect High-Value Agreements with Identity Verification and Authentication

When it comes to important agreements, you need to know your signer is who they say they are.

The standard practice of identifying a signer is to send a link to the signer’s email address. But you may need enhanced identification because of agreement value or legal risk. The challenge is to easily integrate stronger verification while keeping the signing experience user-friendly.

That’s where DocuSign Identify comes in. Identify provides enhanced signer identification and authentication that is built into the eSignature workflow, including:

- **ID Verification**: digital identity proofing of signers via government ID verification, knowledge-based authentication (KBA) questions, or electronic IDs
- **SMS/Call Authentication**: multi-factor authentication via text message or phone call
- Identify is extensible with trust service solutions around the world and helps meet ID requirements for digital signatures.

By aggregating a global network of verification technologies integrated into eSignature, DocuSign Identify enables you to transact a full range of agreements with increased compliance.

Reduce the risk of fraud

- Require signers to clear an enhanced identification method before they can access the agreement
- Verify new user identities with multiple options, such as government-issued ID, electronic or bank-based ID, and knowledge-based questions
- Authenticate existing users with simple 2-factor authentication via SMS or phone call

Streamline compliance and audit efforts

- Support compliance efforts with industry standards such as Know Your Customer (KYC) and Anti-Money Laundering
- Verification status is recorded in the eSignature Certificate of Completion for audit purposes
- Write verification status and ID data into your system of record using APIs

Integrate identification into Signature

- Add your choice of enhanced identification methods into eSignature
- Customize the user experience: add your own branding, decide types of acceptable IDs or types of authentication

Support global coverage, including digital signature requirements

- Access the industry’s largest network of identity verification and trust service providers
- Validate all major ID types such as a government-issued document or digital IDs, commercial eIDs and digital certificates
- Meet identity requirement for digital signatures at the Advanced and Qualified levels (AES and QES) under the European Union’s Electronic Identification, Authentication and Trust Services regulation (eIDAS)
